

Technical data

Mounting and operating instructions

Mounting

Universal mounting position using snap-on mounting to standard 35x7.5mm DIN rail.

Miniature circuit breakers (MCBs) can also be mounted to front of door using a panel cut-out with breaker handle protruding through panel opening for external operation. Special front mounting kit type ME is available (see page 2.12).

Connection

Terminals are suitable for solid or flexible conductors from 18 to 4 AWG (0.75 to 25mm²) with no busbar connected. When maximum busbar size of 36 mm² is used, maximum cable is 6 AWG (16 mm²).

Maximum tightening torque of 17.5 in-lb (2 Nm) for line/load terminals and 4.5 in-lb (0.5Nm) for accessory device terminals.

Operation

MCBs are switched on by moving the handle to the upper position. Stamped onto the handle switch, a "I" is visible confirming that the breaker is closed.

The MCBs are "trip-free," if the handle is being forced to the "ON" position, the breaker will still trip under fault conditions.

The "O" marking indicates that the breaker is in the "OFF" position. The MCB is now open and the load is disconnected from line power.

When a breaker has tripped, the MCB handle should first be set to the full "OFF" position to make certain the trip mechanism has been reset. Once the fault has been determined and cleared the MCB can again be switched "ON".

Maintenance

ABB miniature circuit breakers require no special maintenance; only normal electrical system maintenance procedures are required.

Possible mounting arrangements of MCB accessories

Auxiliary switch/bell alarm neutral disconnect

Shunt trip or undervoltage release mounted with auxiliary switch

Shunt trip and/or undervoltage release

Auxiliary switch

14

Bell alarm with auxiliary contact

Shunt trip and undervoltage release

Technical data

Busbars & connectors

Connection methods

Dual function terminals provided in open position for connection to busbars. Pressing on screw head opens box terminal for cable insertion. Only the lower terminal is dual function.

Terminals allow for connection of cable 18-4 AWG. Conductors of different sizes may also be used in same terminal.

Up to five conductors, 16 AWG each, can be safely connected per terminal.

Lower terminals can be bussed together with single phase or multi-phase busbars as shown. Upper terminals can also be busbar connected.

Lower terminal can also be bussed with solid round conductor.

Cables can be connected to box terminals in addition to busbar connections on lower, dual function terminals.

Influence of frequency on electro-magnetic trips

Magnetic trip values shown on trip curves are valid for 50/60Hz applications. For frequencies other than 50/60Hz, the magnetic (instantaneous) trip values are increased by the factor given below:

	16 2/3 - 60Hz	100Hz	200Hz	400Hz	DC
Approx. factor	1	1.1	1.2	1.5	1.5

Thermal tripping is independent of frequency.

Ⓞ Available for purchase. See page 14.19.

Technical data

Let-through values

Description

All ABB miniature circuit breakers substantially reduce the maximum let-through current from the peak available short circuit current.

- I_K - RMS current of fault
- I_D - Max let-through of MCB
- V_n - System voltage
- V_B - Arc voltage of MCB
- t_k - Breaking time of MCB

Let-through values I²t
