SQUARE D
GROUPE SCHNEIDER

Introduction

The GV manual starter and protector provides manual isolation, manual motor control, and overcurrent protection in one compact unit. Square D offers three different products that make up the GV product family - GV2M, GV2P, and GV3M. These devices are UL Listed as Manual Motor Controllers.

The GV2M is the basic starter designed to control motors with full load currents up to 32 A. The GV2P is a high performance starter that offers a high withstand rating and visible trip indication. The GV3M starter is used on large motors with full load currents up to 63 A.

The GV manual starters and protectors are also UL Listed for group installation applications. See page 5 for maximum fuse or circuit breaker ratings when used in group installations.

In many European applications, the GV devices are used as circuit breakers because they meet the requirements of IEC 947-2 for circuit breakers. However, the GV starter does not meet North American circuit breaker standards such as UL or CSA.

Standard Features

The GV family offers such standard features as:

- Class 10, ambient compensated overload relay
- Single phase sensitivity
- Instantaneous magnetic trip
- Test trip mechanism
- Provision for padlocking in the OFF position
- Fingersafe terminals
- Captive +/- screws with screw driver guide
- North American and European terminal markings

GV2M
0.1 to 32 A
Up to 20 hp @ 460 V
10 kA withstand @ 480 V
Push Button Operator

GV2P
0.1 to 25 A
Up to 15 hp @ 460 V
50 kA withstand @ 480 V
Rotary Handle Operator
Visible Trip Indication

GV3M
1 to 63 A
Up to 40 hp @ 460 V
50 kA withstand @ 480 V
Push Button Operator

Type of protection	Thermal-magnetic		
Mounting	● Clip-on mounting on 35 mm DIN rail. Unclips without using a tool. ● Panel mount with metal adapter plate.	● Clip-on mounting on 35 mm DIN rail. Unclips without using a tool. ● Panel mount directly.	● Clip-on mounting on 35 mm DIN rail. Unclips without using a tool. ● Panel mount directly.
Connection	Use a cross-head screwdriver; captive screws. Same screwdriver used for connections on GV2 starters and their add-on blocks.		
Marking	By marker holder supplied with each unit.		
Tripping test	By means of a fine-blade screwdriver on front face of product.		
Signalling on front face ● By the manual control device ● By mechanical flag indicator	● Of ON or OFF state	● Of ON or OFF state ● Of tripping by overload, short circuit, undervoltage or shunt trip. ● Of tripping by short circuit.	● Of ON or OFF state
Padlocking	In the OFF position, with padlock, using the system incorporated in the manual control device.		
Tamper-proof current dial	—	Of the thermal current setting dial, by transparent cover which can be sealed.	—
Accessories	Mounted on the front of the product: - Either N/C or N/O, N/O + N/O or N/O + N/C instantaneous contact blocks which do not increase the width of the product. Side-mounting, accessories snap onto the starters, without the use of tools. ● On the left-hand side, contact blocks which provide the following information: - N/O + N/O or N/O + N/C Start-Stop contacts, - N/O or N/C trip signalling contact, incorporating a mechanical flag indicator, and N/O or N/C Start-Stop contact, - C/O magnetic trip signalling contact, associated with a mechanical flag indicator, used for reset. ● On the right-hand side: - shunt trip or undervoltage trip.		
	- Combination block for use with K contactor. - Bus bars and connectors	- For GV2P, visible isolation block which mounts on the incoming terminals of the device - Door interlock mechanism.

Group Motor Installations

The GV2/GV3 devices are UL 508 listed, Manual Motor Controllers for use in group installations. If each motor in the grouping is controlled by a GV2/GV3 device, only one branch circuit protective device (circuit breaker or fusing) is necessary for the entire group per NEC 430-53c, provided that:

- The controller is UL listed for group installation
- The overload device is UL listed for group installation

Refer to the table below to determine the maximum RMS short circuit current capacity for the GV2/GV3. The GV1L3 current limiter module may be used to increase the maximum RMS short circuit values for the GV2M14-M22.

The Maximum RMS short circuit current rating for the complete group installation is determined by the individual GV device with the lowest RMS short circuit value.

For example: a group installation uses a GV2M08, GV2M16 and GV2M22. The respective maximum RMS short circuit values @ 480 V, without the use of a GV1L3 current limiter module, are: 50 kA, 25 kA and 10 kA. Therefore, the group installation has a maximum RMS short circuit value of 10 kA.

Maximum RMS Short Circuit Current

Current Range	GV2	Max RMS, kA		w/GV11L3 Current Limiter		GV2	Max RMS, kA		GV3	Max RMS, kA	
		480 V	600 V	480 V	600 V		480 V	600 V		480 V	600 V

Suitable for isolation conforming to IEC 947-1 § 7-1-6		Yes		Yes	
Tightening torque		15 lb-in(1.7 N•m)		15 lb-in(1.7 N•m)	
Resistance to mechanical impact		0.5 J		0.5 J	
		Enclosed : 6		–	
Sensitivity to phase failure		Yes, conforming to IEC 947-4-1, paragraph 7-2-1-5-2			

Characteristics

Type		GV2M	GV2P
Utilization category conforming to IEC 947-2		A	A
conforming to IEC 947-4-1		AC-3	AC-3
Rated operational voltage (Ue) conforming to IEC 947-2	**V**	690	690
Rated insulation voltage (Ui) conforming to IEC 947-2	**V**	690	690
conforming to CSA C22.2 No. 14 and UL 508	**V**	600	600
Rated operational frequency conforming to IEC 947-2	**Hz**	50/60	50/60
Rated impulse withstand voltage (U imp) conforming to IEC 947-2	**kV**	6	6
Total power dissipated per pole	**W**	2.5	2.5
Mechanical life (ops : closing, opening)	**ops**	100 000	100 000
Electrical life for AC-3 duty	**ops**	100 000	100 000
Duty class (maximum operating rate)	**ops/h**	25	25
Rated duty conforming to IEC 947-4-1		Continuous duty	Continuous duty

Characteristics

Type		GV2AU	GV2AS
Rated insulation voltage (Ui) conforming to IEC 947-1	**V**	690	690
Operational voltage conforming to IEC 947-1	**V**	0.85-1.1 Ue	0.7-1.1 Ue
Drop-out voltage	**V**	0.35-0.7 Ue	0.2-0.75 Ue
Inrush consumption	**VA**	12	14
	W	8	10.5
Sealed consumption	**VA**	3.5	5
	W	1.1	1.6
Operating time conforming to IEC 947-1	**msec**	From the moment the voltage reaches its operational value until opening of the GV2 10-15	
On-load factor		100 %	
Wiring Number of conductors and cross sectional area (c.s.a.)		Min	Max
Solid cable		1-#16 to #12 AWG(1-2.5 mm^2)	2-#16 to #12 AWG(1-2.5 mm^2)
Flexible cable without cable end		1-#18 to #12 AWG(0.75-2.5 mm^2)	2-#18 to #12 AWG(0.75-2.5 mm^2)
Flexible cable with cable end		1-#18 to #14 AWG(0.75-1.5 mm^2)	2-#18 to #14 AWG(0.75-1.5 mm^2)
Tightening torque		12 lb-in(1.4 N•m) max	
Mechanical life (ops: closing-opening)	**ops**	100 000	

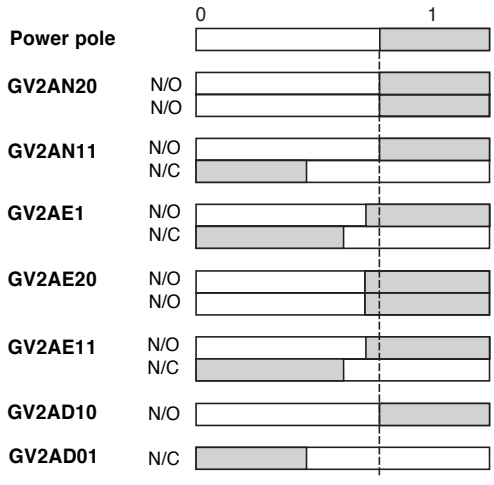
Type		Instantaneous auxiliary contacts **GV2AN, GV2AD**							Fault signalling contacts **GV2AD, GV2 AM11**			
Rated insulation voltage (Ui) (associated insulation coordination) conforming to IEC 947-1	**V**	690							690			
to CSA C22.2 No. 14 and UL 508	**V**	600							300			
Conventional rated thermal current (Ith) conforming to IEC 947-5-1	**A**	6							2.5			
to CSA C22.2 No. 14 and UL 508	**A**	5							1			
Mechanical life (ops: closing-opening)	**ops**	100 000							1000			
Operational power and current conforming to IEC 947-5-1 a.c. operation		AC-15/100 000 ops							AC-14/1000 ops			
Rated operational voltage (Ue)	**V**	48	110 127	230 240	380 415	440	500	690	24	48	110 127	230 240
Operational power, normal conditions	**VA**	300	500	720	850	650	500	400	36	48	72	72
Occasional breaking and making capacities, abnormal conditions	**VA**	3000	7000	13 000	15 000	13 000	12 000	9000	220	300	450	450
Rated operational current (Ie)	**A**	6	4.5	3.3	2.2	1.5	1	0.6	1.5	1	0.5	0.3
Operational power and current conforming to IEC 947-5-1 d.c. operation		DC-13/100 000 ops							DC-13/1000 ops			
Rated operational voltage (Ue)	**V**	24	48	60	110	240 (1)	–	–	24	48	60	–
Operational power, normal conditions	**W**	140	240	180	140	120	–	–	24	15	9	–
Occasional breaking and making capacities, abnormal conditions	**W**	240	360	240	210	180	–	–	100	50	50	–
Rated operational current (Ie)	**A**	6	5	3	1.3	0.5	–	–	1	0.3	0.15	–
Minimum operational conditions d.c. operation	**V**	17										
	mA	5										
Short circuit protection		By **GB2CB●●** circuit breaker (rating according to operational current for Ue ≤ 415 V) or by gl fuse 10 A max										

Wiring Number of conductors and cross sectional area (c.s.a.)		Min	Max
Solid cable		1-#16 to #12 AWG(1-2.5 mm^2)	2-#16 to #12 AWG(1-2.5 mm^2)
Flexible cable without cable end		1-#18 to #12 AWG(0.75-2.5 mm^2)	2-#18 to #12 AWG(0.75-2.5 mm^2)
Flexible cable with cable end		1-#18 to #14 AWG(0.75-1.5 mm^2)	2-#18 to #14 AWG(0.75-1.5 mm^2)
Tightening torque	**N•m/lb-in**	12 lb-in(1.4 N•m) max	

(1) Add an RC circuit type LA4 D to the load terminals, see Square D Digest.

Type		Instantaneous auxiliary contacts **GV2AE**			
Rated insulation voltage (Ui) (associated insulation coordination) conforming to IEC 947-1	**V**	250 (690 with respect to main circuit)			
to CSA C22.2 No. 14 and UL 508	**V**	300			
Conventional rated thermal current (Ith) conforming to IEC 947-5-1	**A**	2.5			
to CSA C22.2 No. 14 and UL 508	**A**	1			
Mechanical life	**ops**	100 000			
Operational power and current to IEC 947-5-1. a.c. operation		AC-15/100 000 ops (closing / opening)			
Rated operational voltage (Ue)	**V**	24	48	110 127	230 240
Operational power, normal conditions	**VA**	48	60	120	120
Occasional breaking and making capacities, abnormal conditions	**VA**	480	600	1270	2400
Rated operational current (Ie)	**A**	2	1.25	1	0.5
Operational power and current to IEC 947-5-1. d.c. operation		DC-13/100 000 ops (closing / opening)			
Rated operational voltage (Ue)	**V**	24	48	60	–
Operational power, normal conditions	**W**	24	15	9	–
Occasional breaking and making capacities, abnormal conditions	**W**	100	50	50	–
Rated operational current (Ie)	**A**	1	0.3	0.15	–
Low level switching contact reliability		Number of faults for “n” million operating cycles (17 V-5 mA): = 10^{-6}			
Short circuit protection		By **GB2CB06** circuit breaker or gl fuse, 10 A max			
Wiring Number of conductors and cross sectional area		Min		Max	
Solid cable		1-#16 to #12 AWG(1-2.5 mm^2)		2-#16 to #12 AWG(1-2.5 mm^2)	
Flexible cable without cable end		1-#18 to #12 AWG(0.75-2.5 mm^2)		2-#18 to #12 AWG(0.75-2.5 mm^2)	
Flexible cable with cable end		1-#18 to #14 AWG(0.75-1.5 mm^2)		2-#18 to #14 AWG(0.75-1.5 mm^2)	
Tightening torque		12 lb-in(1.4 N•m) max			

Contact operation
instantaneous auxiliary contacts



Contact open

Contact closed

Operation of fault signalling contacts

GV2AM11
Change of state following tripping on short circuit.

GV2AD10 and AD01
Change of state following tripping on short circuit, overload or undervoltage.

3-pole busbars GV1G0• and GV2G0•

Rated insulation voltage (Ui)	Conforming to IEC 947-1	**V**	690
Conventional rated thermal current (Ith)	Conforming to IEC 439-1	**A**	63
Permissible peak current (I peak)		**kA**	11
Permissible thermal limit (I^2t)		**kA^2s**	104
Degree of protection	Conforming to IEC 529		IP 20

Terminal blocks GV2G05 and GV1G09

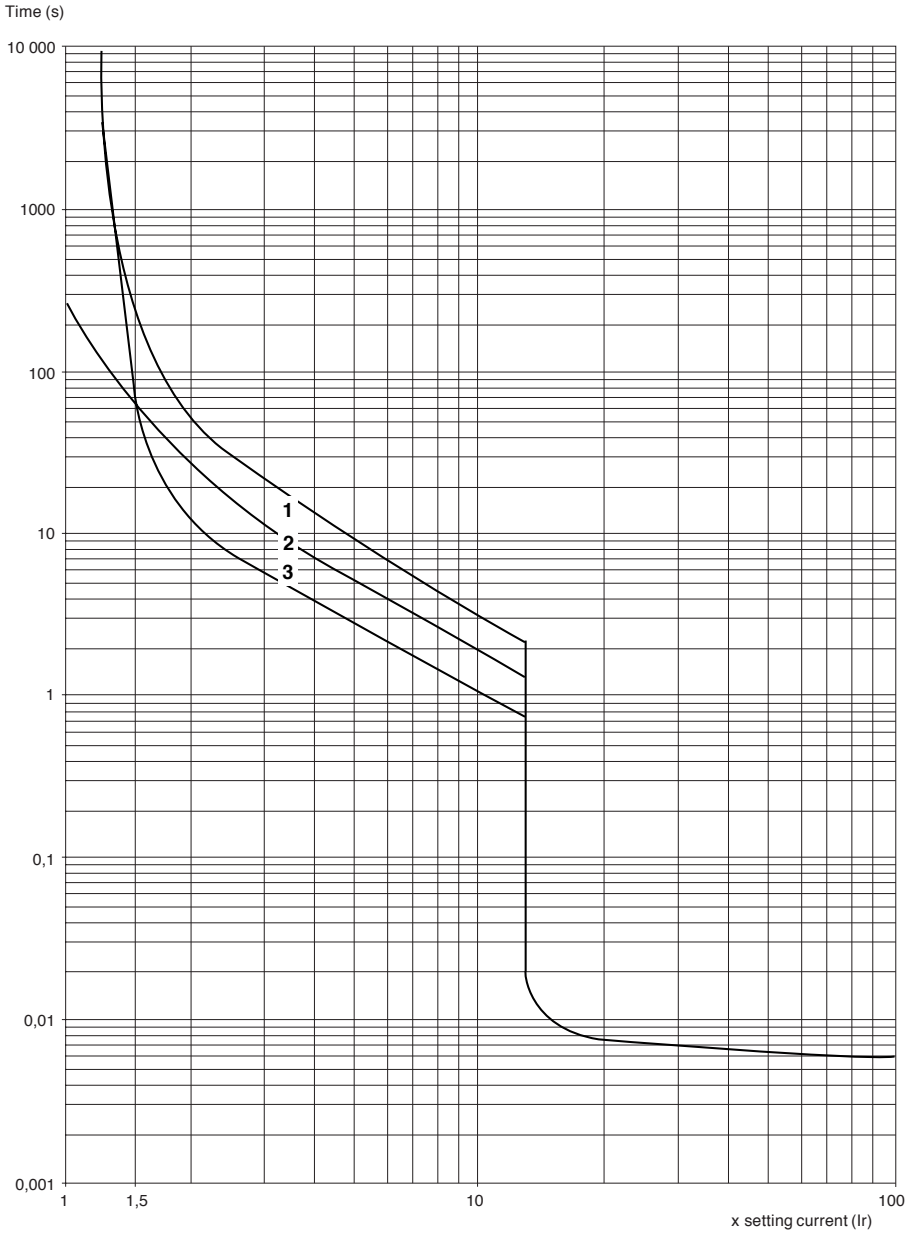
Rated insulation voltage (Ui)	Conforming to IEC 947-1	**V**	690
Conventional rated thermal current (Ith)	Conforming to IEC 439-1	**A**	63
Degree of protection	Conforming to IEC 529		IP 20
Wiring	Solid cable		1-#14 to #2 AWG(1.5 to 25 mm^2) conductor or 2-#14 to #6 AWG(1.5 to 10 mm^2) conductors
	Flexible cable without cable end		1-#14 to #2 AWG(1.5 to 25 mm^2) conductor or 2-#12 to #6 AWG(2.5 to 10 mm^2) conductors
	Flexible cable with cable end		1-#14 to #4 AWG(1.5 to 16 mm^2) conductor or 2-#14 to #10 AWG(1.5 to 4 mm^2) conductors
Tightening torque	Connector		20 lb-in(2.2 N•m)
	Screw clamp		15 lb-in(1.7 N•m)

Current limiter GV1L3

Rated insulation voltage (Ui)	Conforming to IEC 947-1	**V**	690
Conventional rated thermal current (Ith)	Conforming to IEC 947-1	**A**	63
Operating threshold	rms current	**A**	1500 (non adjustable threshold)
Wiring	Solid cable		1-#14 to #2 AWG(1.5 to 25 mm^2) conductor or 2-#14 to #6 AWG(1.5 to 10 mm^2) conductors
	Flexible cable without cable end		1-#14 to #2 AWG(1.5 to 25 mm^2) conductor or 2-#12 to #6 AWG(2.5 to 10 mm^2) conductors
	Flexible cable with cable end		1-#14 to #4 AWG(1.5 to 16 mm^2) conductor or 2-#14 to #10 AWG(1.5 to 4 mm^2) conductors
Tightening torque			20 lb-in(2.2 N•m)

Thermal-magnetic tripping curves for GV2M and GV2P

Average operating time at 20°C according to multiples of the setting current

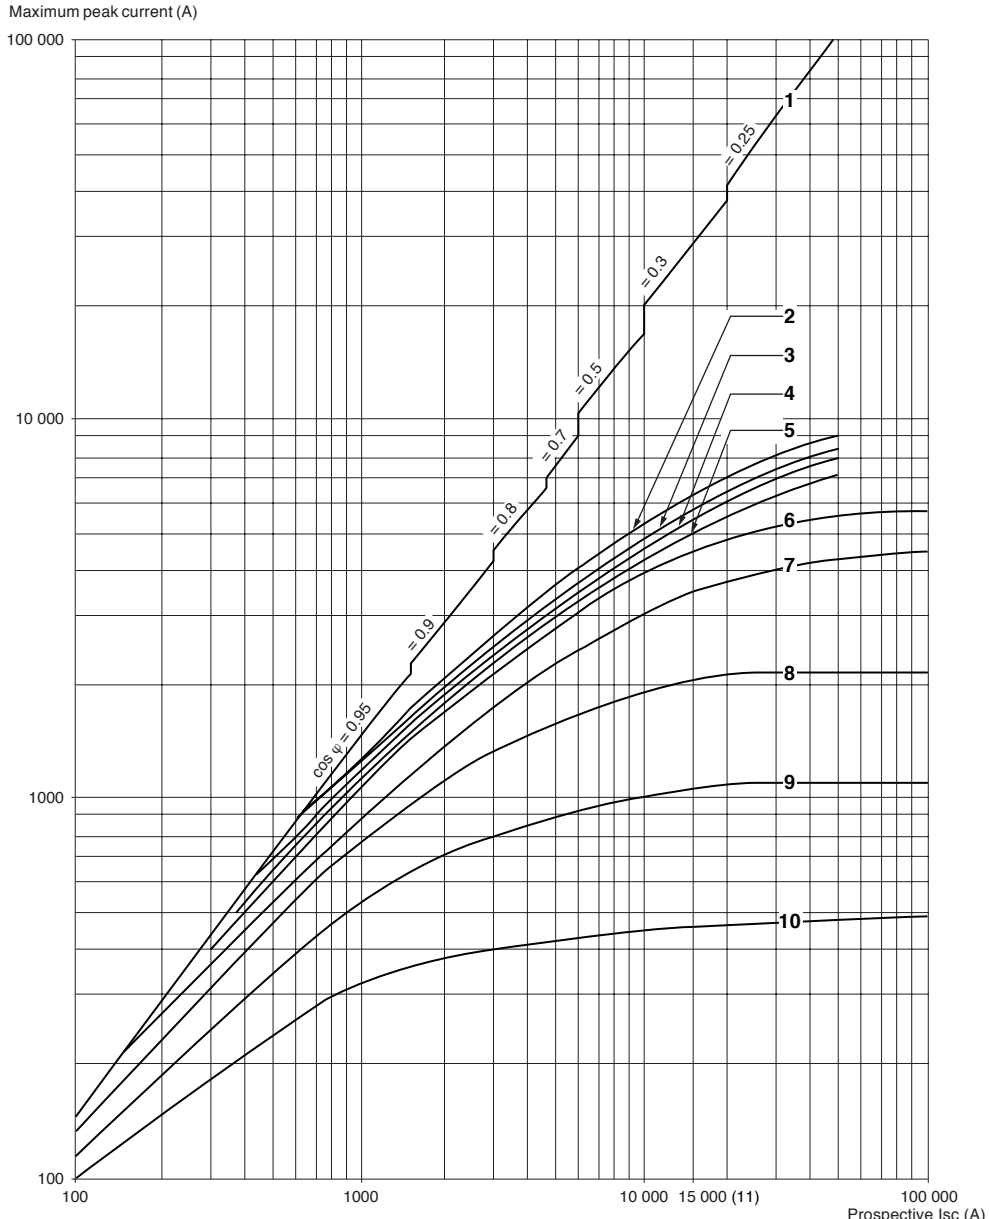


1 3 poles from cold state
2 2 poles from cold state
3 3 poles from hot state

Current limitation on short circuit

For GV2M and GV2P
Three-phase 400/415 V

Dynamic stress
I peak = f (prospective Isc) at 1.05 Ue = 435 V

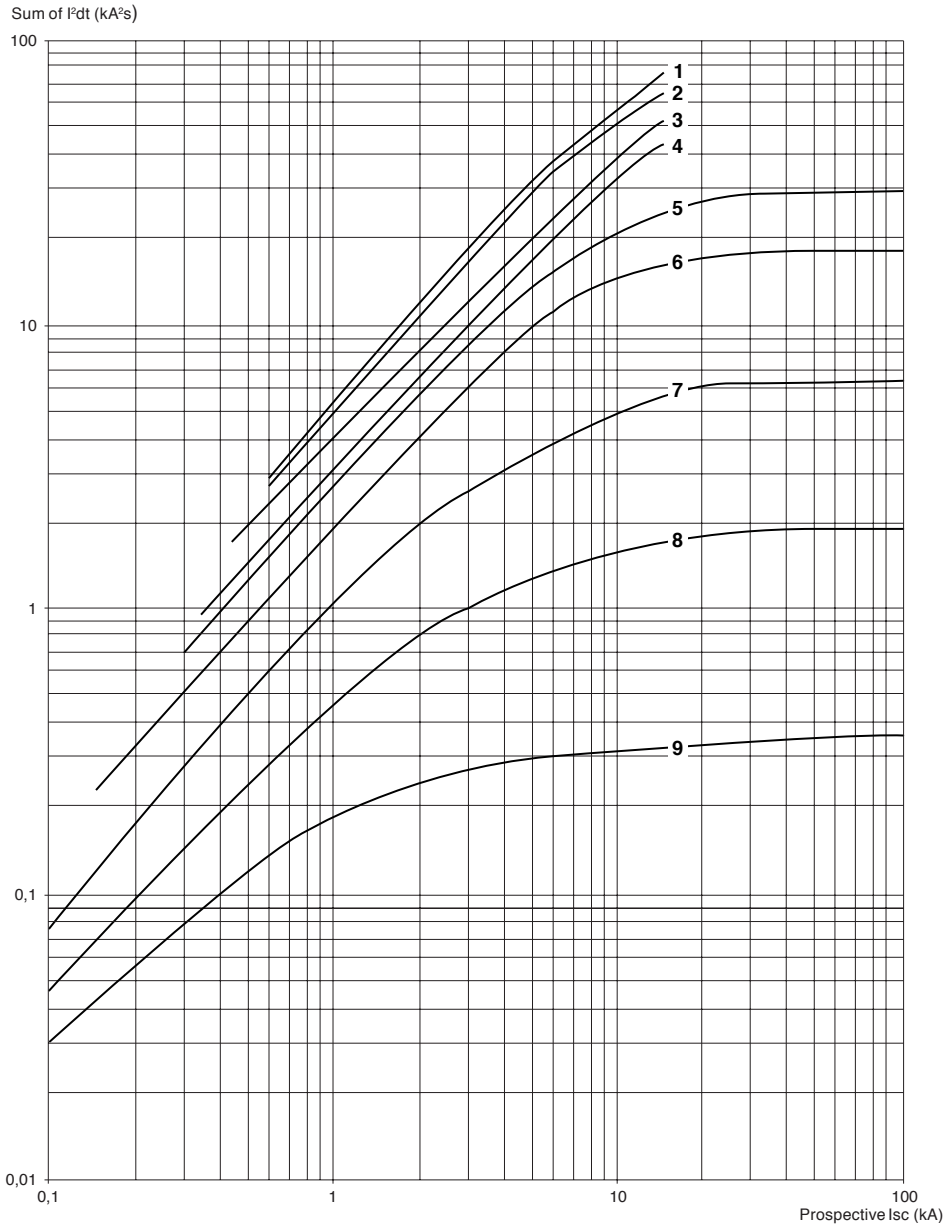


(1) I peak max.
(2) 20-25 A
(3) 17-23 A
(4) 13-18 A
(5) 9-14 A
(6) 6-10 A
(7) 4-6.3 A
(8) 2.5-4 A
(9) 1.6-2.5 A
(10) 1-1.6 A
(11) Limit of rated ultimate breaking capacity on short circuit of GV2M (14, 18, 23 and 25 Amp ratings)

Thermal limit on short circuit for GV2M

Thermal limit in kA² s in the magnetic operating zone

Sum of I²dt = f (prospective Isc) at 1.05 Ue = 435 V

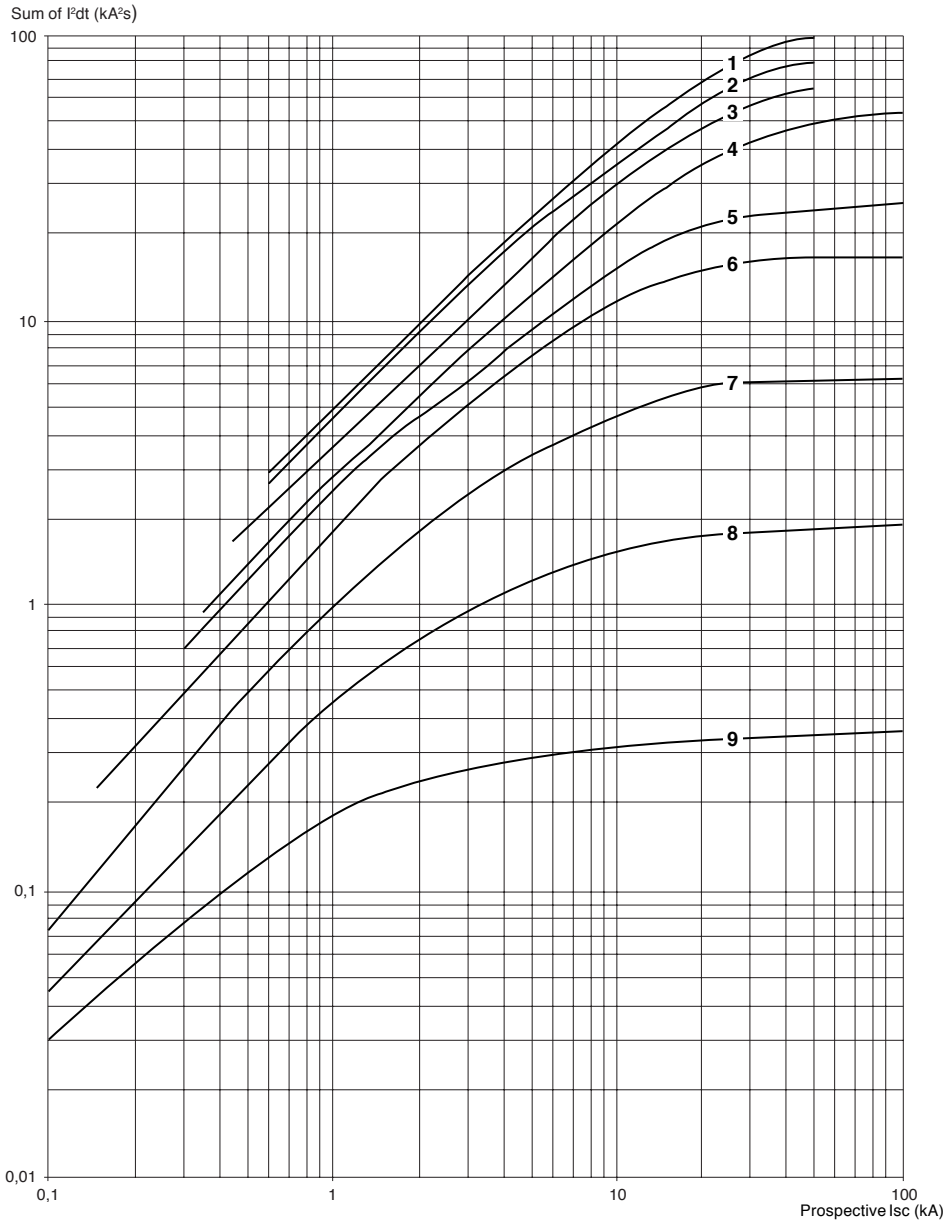


1 20-25 A
2 17-23 A
3 13-18 A
4 9-14 A
5 6-10 A
6 4-6,3 A
7 2.5-4 A
8 1.6-2.5 A
9 1-1.6 A

Thermal limit on short circuit for GV2P

Thermal limit in kA²s in the magnetic operating zone

Sum of I^2dt = f (prospective Isc) at 1.05 Ue = 435 V



1 20-25 A
2 17-23 A
3 13-18 A
4 9-14 A
5 6-10 A
6 4-6.3 A
7 2.5-4 A
8 1.6-2.5 A
9 1-1.6 A

	N/O		1	**GV3A09**
Padlocking device for Start button			5	**GV1V02**

(1) only 1 voltage trip **OR** 1 fault signalling contact to be added inside the GV3 device.

Metal enclosure

Application	Type	Degree of protection of enclosure	Catalog Number
For GV3 with or without accessories	Surface mounting	IP 55	**GV3CE01**

Enclosure accessories (to be ordered separately)

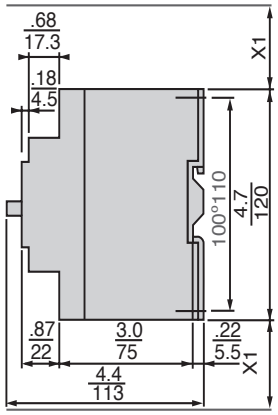
Description	Reference			
Neutral terminal, 2-pole				**LA9D40959**
IP 55 padlocking device for operators (when padlocked, the motor circuit is automatically in the Open (OFF) position)				**GV1V01**
Mushroom head “stop” pushbutton (2) Ø 40 mm, red	Spring return		1	**GV2K011**
	Latching	Key release (key #455)	1	**GV2K021**
		Turn to release	1	**GV2K031**
	Latching/Padlockable	Turn to release	1	**GV2K04**
Sealing screw for enclosure cover				**DE1DS4091**

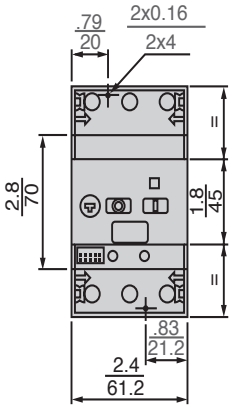
(2) Supplied with IP 55 sealing kit.

Mounting Dimensions

Dimensions **Inches** / MM

GV3M

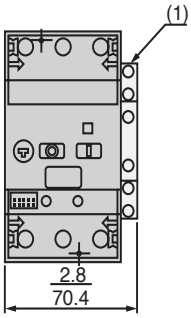


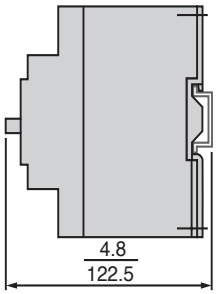


X1 = Electrical clearance (breaking at Isc max)

1.6 in/40 mm for Ue < 500 V
2.0 in/50 mm for Ue = 690 V

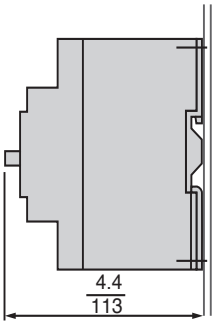
Mounting
on rail AM1DE200 or AM1ED201

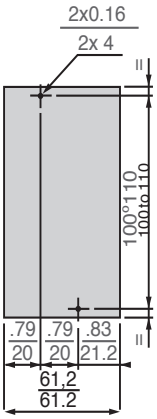




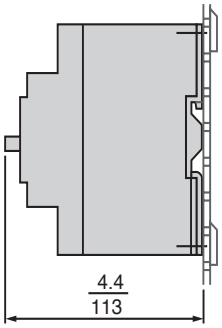
(1) Auxiliary contact blocks GV1A01 to A07

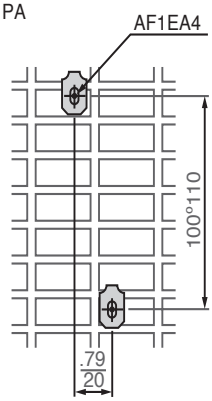
Mounting
on panel



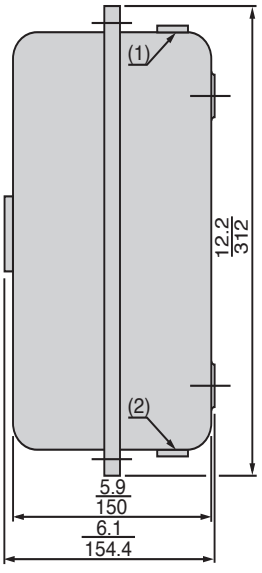


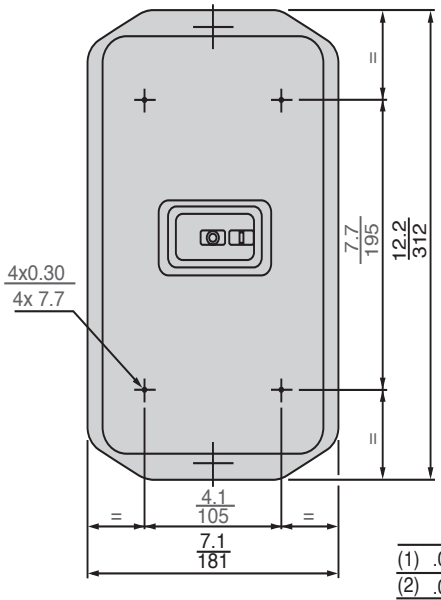
on pre-slotted mounting plate AM1PA





Surface mounting enclosure GV3CE01





(1) .04 x .83 in/1 x 21 mm and .04 x 1.5 in/1 x 37.5 mm blanking plugs for cable entries
(2) .04 x .83 in/1 x 21 mm and .08 x 1.5 in/1 x 37.5 mm blanking plugs for cable entries

Pre-assembled panel busbar system AK5

The assembly of automated control and distribution panels requires the use of products that are not only safe but also simple and quick to mount and cable.

The AK5 pre-assembled busbar system meets these criteria by incorporating prefabricated elements which provide 3 principal functions :

Current supply

Pre-assembled 160 A (at 35 °C) 4-pole busbar system **1**.

The busbar systems are available in 6 lengths : 344, 452, 560, 668, 992, 1100 mm (13.5", 17.8", 22", 26.3", 39", 43.3").

An incoming supply terminal block **2** is located at the extreme left of the busbar system.

“Knock-out” partitions allow cabling from above or below to the terminal block connections **3**, which are protected by a removable cover **4**.

Current distribution

The tap-offs **5** clip onto the busbar system with instantaneous mechanical and electrical connection to the busbars.

2 ratings are available : 16 and 32 A.

The tap-off units not only ensure rapid mounting but also provide visual “symmetry” for the power distribution circuit and complete safety when accessing under live circuit conditions.

Component mounting

Component mounting plate incorporating electrical tap-off.
Tap-off rating : 25 A or 50 A.

The mounting plates clip onto the mounting rail **11**, which also supports the busbar system, and at the same time make electrical connection via the incorporated tap-off.

2 types of mounting plates are available :

-single plate **6** (height 105 mm) with bolt-on 35 mm wide ⊔ rail **7**. This omega rail may be bolted in one of two positions, each with a 10 mm vertical step,

-double plate **8** and **14** (height 190 mm) with 2 bolt-on 35 mm wide ⊔ rails **9** mounted on 100 mm mounting centers. Each rail may be bolted in one of four positions, each with a 10 mm vertical step. These mounting plates are supplied with connectors **12** to allow wiring between control and protection devices.

Bolt-on width extension plates **10** are also available for mounting wider components. Using a lateral end stop **15** in conjunction with these plates also supports the AK5-JB busbar system when used vertically.

A control terminal block **13**, comprising of a support plate bolted onto the single or double mounting plates and a 10-pole plug-in block, enables connection of the control circuit wires (c.s.a. 1.5 mm^2 max.).

Pre-assembled panel busbar system AK5

Characteristics

Busbar system characteristics

Conforming to standards			IEC 439

◆ Applications up to 25 A only.

▲ For installations using a GV plus a contactor mounted one above the other, follow the steps below for determining the maximum number of devices per busbar:

1. Determine how many GVs could be installed from the AK5PA231 section above. Be sure to properly select the number of side mounted auxiliaries that will be used.
2. Determine how many contactors could be installed from the AK5PA232 (for non-reversing contactors) or AK5PA232S (for reversing contactors) section above. Be sure to properly select the number of side mounted auxiliaries that will be used.
3. Choose the smaller of the two numbers from step 1 and 2.

160 Ampere Three Phase Busbar System

AK5JB143

Total number of 18 mm "Pitches"	Maximum number of tap-offs or mounting plates: 36 mm (3 phase) Tap-Offs	Std (54 mm) mounting Plate	Double-width (108 mm) mounting plate	Busbar length in	Busbar length mm	Catalog Number
12	6	4	2	13.39	344	**AK5JB143**
18	9	6	3	17.64	452	**AK5JB144**
24	12	8	4	21.85	560	**AK5JB145**
30	15	10	5	26.05	668	**AK5JB146**

54	27	18	9	42.90	1100	**AK5JB1410**

Mounting Rail

Must be used for mounting plate tap-offs.

AM1DL201

Description	Material	Depth (mm)	Length (mm)	Catalog Number
75 mm Omega Rail	2 mm steel with 10 microns of zinc chromate	15	2000	**AM1DL201**

Bus Tap-Offs

Plugs into busbar for wiring to a separately mounted device.

AK5PC33

Width (mm)	Width (in)	Rated Current	Wire Length (mm)	Wire Length (in)	Sold in Lots of	Catalog Number
36	1.42	16 A	200	7.87	6	**AK5PC13**
36	1.42	32 A	250	9.84	6	**AK5PC33**
36	1.42	32 A	1000	39.37	6	**AK5PC33L**

Mounting Plate Tap-Offs

Combines a bus tap-off with a prefabricated mounting plate for convenient mounting of contactors, GV manual starters, and Integral self-protected starters.

AK5PA232S

Application (See page 44 for mounting restrictions)	Width (mm)	Height (mm)	Number of DIN rails required	Number of 18 mm spaces	Rated Current	Catalog Number
GV2 Manual Starter Integral 18 Starter	54	105	1	3	25 A	**AK5PA231**
GV2 + Contactor	54	190	2 ▲	3	25 A	**AK5PA232**
GV2 + Reversing Contactor Reversing Integral 18	108	190	2 ▲	6	25 A	**AK5PA232S**
Integral 32 Starter GV3 + LC1D Contactor (mounted side by side)	108	190	1	6	50 A	**AK5PA532**

▲ Mounting plate tap-offs with 2 DIN rails include a 25 A rated prefabricated connector for easily wiring the top component to the bottom component.

AK5PA231

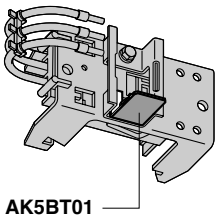
AK5PA532

Extension Plate

AK5PE17

Used to support wider components. Bolts onto standard width plate, after having removed the DIN rail.

Application	Attach mounting plate	Width (mm)	Height (mm)	Number of DIN rails	Number of 18 mm spaces required	Catalog Number
Integral 32 (for applications less than 25 A)	AK5PA231	71	105	1	4	**AK5PE17**
GV2 + Contactor (with or without side-mounted auxiliaries)	AK5PA232	71	190	2	4	**AK5PE27**



AK5BT01

Side Stop

Used to secure components on mounting plates when AK5 busbar is mounted vertically.

Description	Sold in lots of	Catalog Number
Metal side stop clip	4	**AK5BT01**

Type 2 Coordinated Starters

IEC Standard 947-4-1 defines Type 2 Coordination as a level of protection which assures that a motor starter will be suitable for further use following a short circuit, although small tack welds can easily be broken. Device should be replaced during regular maintenance. Proper combination of GV manual motor starters with LC1D contactors can yield a Type 2 Coordinated installation. Refer to the table below for selection.

Three Phase HP Rating			Manual Starter	Contactor	Max. Available Fault Current (kA)
200 V	230 V	460 V			
-	-	-	GV2P02	LC1D09	50
-	-	-	GV2P03	LC1D09	50
-	-	-	GV2P04	LC1D09	50
-	-	0.5	GV2P05	LC1D09	50
-	-	0.75	GV2P06	LC1D09	50
0.5	0.5	1	GV2P07	LC1D09	50
0.75	1	2	GV2P08	LC1D09	50
1.5	1.5	3	GV2P10	LC1D09	50
2	3	5	GV2P14	LC1D09	50
3	3	10	GV2P16	LC1D18	10♦
5	5	10	GV2P20	LC1D18	10♦
5	7.5	15	GV2P21	LC1D25	6♦
5	7.5	15	GV2P22	LC1D25	6♦
10	10	30	GV3M40	LC1D40	8
20	20	40	GV3M63	LC1D80	8

♦With use of additional GV1L3 current limiter, available fault current may be increased to 50 kA.

Fuse and Circuit Breaker Selection for Group Motor Installations.

Selecting the proper upstream short circuit protection for Group Motor installations can sometimes be a confusing process. Specific National Electric Code rules must be applied for Group Motor installations. The examples below illustrate the most common applications of GV manual starters with upstream short circuit protection in a Group Motor installation. Refer to NEC Section 430-53 C and D for proper conductor ampacity selection.

Two examples are shown below:

Example 1:

8 motors with the sizes shown below are installed on a conveying system. Choose the correct GV manual starter and the proper size short circuit protection for this application. The user prefers time-delay fuses to circuit breakers.

Motor Qty	HP	Voltage	FLA
1	5	460	7.6
2	3	460	4.8
5	2	460	3.4

One GV2M14, two GV2M10, and five GV2M08 manual starters would be selected for this group motor installation.

Per N.E.C. section 430-52 & -53 and N.E.C. table 430-152, the time-delay fuse must be sized as follows:

175% FLA for largest motor + sum of FLAs for all other motors
==> (1.75 x 7.6) + (2 x 4.8) + (5 x 3.4) = 39.9 A

N.E.C. 430-52 allows use of the next largest *standard* size fuse — which in this case is 40 A. If nuisance tripping was a problem with this fuse selection, N.E.C. does allow 225% of largest motor FLA to be used in lieu of 175% when calculating the size. In this case, the calculation would be as follows:

(2.25 x 7.6) + (2 x 4.8) + (5 x 3.4) = 43.7 A

The next largest standard size in this case is a 45 A fuse.

Example 2:

10 motors with the sizes shown below are installed on a packaging machine. Choose the proper size circuit breaker for this application.

Motor Qty	HP	Voltage	FLA
2	10	460	14
1	5	460	7.6
2	3	460	4.8
5	2	460	3.4

Per N.E.C. section 430-52 & -53 and N.E.C. table 430-152, the circuit breaker must be sized as follows:

250% FLA for largest motor + sum of FLAs for all other motors
==> (2.5 x 14) + 14 +7.6 + (2 x 4.8) + (5 x 3.4) = 83.2 A

The next largest standard size circuit breaker is 90 A.

If nuisance tripping is a problem, N.E.C. allows 400% of largest motor FLA to be used in lieu of 250% when calculating the circuit breaker size. For this case:

(4.0 x 14) + 14 +7.6 + (2 x 4.8) + (5 x 3.4) = 104.2 A

The next largest standard size in this case is a 110 A circuit breaker.
